A stretchable organic solar cell was fabricated by spin-coating the transparent electrode and active layer on a pre-strained elastomeric membrane. Upon release of the pre-strain, the device buckled.

The topographic waves that arose imparted elasticity to the device under tensile strain (up to 27%).

Fluid statics or hydrostatics is the branch of fluid mechanics that studies "fluids at rest and the pressure in a fluid or exerted by a fluid on an immersed body".. It encompasses the study of the conditions under which fluids are at rest in stable equilibrium as opposed to fluid dynamics, the study of fluids in motion. Hydrostatics are categorized as a part of the fluid statics, which is the ...
